

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the Application;

Listing of Claims:

In the Claims:

1. *(Cancelled)*
2. *(Cancelled)*
3. *(Cancelled)*
4. *(Cancelled)*
5. *(Cancelled)*
6. *(Currently amended)* The fuel container as claimed in claim 5 19, wherein said air supplying means includes a pipe engaged into said container body, to supply the air into said petroleum received in said chamber of said container body.
7. *(Original)* The fuel container as claimed in claim 6, wherein said pipe includes a free end having a filter screen attached hereto.

8. *(Original)* The fuel container as claimed in claim 6, wherein said air supplying means includes a pump coupled to said pipe, to pump the air into said pipe.
9. *(Original)* The fuel container as claimed in claim 8, wherein said air supplying means includes a check valve coupled between said pipe and said pump.
10. *(Currently amended)* The fuel container as claimed in claim 5 19 wherein said air supplying means includes a conduit extended within said chamber of said container body, and communicating with said chamber of said container body, to allow said petroleum to flow into and out of said conduit.
11. *(Original)* The fuel container as claimed in claim 10, wherein said pipe is engaged into said conduit for supplying air into said petroleum received in said conduit and said chamber of said container body.
12. *(Cancelled)*
13. *(Cancelled)*
14. *(Cancelled)*

15. *(Currently amended)* The fuel container as claimed in claim + 19 wherein said container body includes an air outlet device having a valve attached thereto, for controlling the air to flow out of said container body.
16. *(Original)* The fuel container as claimed in claim 15, wherein said air outlet device includes a switch attached to said valve, to control the air to flow out of said valve.
17. *(Original)* The fuel container as claimed in claim 15, wherein said air outlet device includes a pressure gauge attached to said valve, to detect a pressure within said chamber of said container body.
18. *(Original)* The fuel container as claimed in claim 15, wherein said air outlet device includes a relieve valve attached to said valve, to release the air received in said chamber of said container body.
19. *(New)* A fuel container comprising:
a container body including a chamber formed therein,
petroleum received in said chamber of said container body, and means for heating said petroleum received in said chamber of said container body, to gasify said petroleum further comprising an air supplying means for supplying air into said chamber of said container body.

20. (*New*) The fuel container as claimed in 19, wherein said container body includes a port provided thereon, and a cap attached to said port to open and close said port, wherein said cap includes a hole formed therein, said hole of said cap is openable when said cap is rotated relative to said port of said container body, to prevent said container body from being over-pressurized
21. (*New*) A fuel container comprising:
a container body including a chamber formed therein,
petroleum received in said chamber of said container body, and means for heating said petroleum received in said chamber of said container body, to gasify said petroleum wherein said heating means includes a heater attached to said container body, to heat said petroleum received in said chamber of said container body, further comprising a switch attached to said container body, and coupled to said heater, to control said heater and to prevent said petroleum from being over heated.
